PRINTING UP TO 6 COLORS DRY OFFSET

TOP LOADING RESISTANCE

170 kg (375 lb) at 23°C / 73°F, 30 days. Product temperature when filling pails and warehouse temperature will affect pail performance. IPL recommends to make necessary testing prior to full production.

PALLETIZATION OF FILLED PAILS

To determine the number of pails you can stack according to the product packed, divide the top loading resistance by the total weight of one filled pail. Take that number not rounded up and add the first unit

Stacked pails recommendation:
4 pails high / pallet

RECOMMENDATIONS

- Do not exceed pallet edges with pails
- Staggered pattern is recommended for greater stability
- Double faced pallets with close together boards on both sides are recommended for best results
- To improve stability, release air from pail when putting the lid
- Stretch wrapping machine tension should be adjusted to pail
- Use slip-sheet to improve pails stability if necessary

OPENING AND CLOSING

TO OPEN: For tear strip lid, pull the tear strip then lift cover. Pry off with hands or use a lid opener for other lid.

TO CLOSE: Align lid on pail and press all around with hands or use a rubber mallet. Lid presses can be used (roller type or moving plate type).

PACKAGING OF EMPTY PAILS/LIDS

WAREHOUSING OF EMPTY PAILS: 2 pallets high in warehousing

Approved by:

Approvals: Virgin materials are approved for food contact and meet FDA (Food and Drug Administration USA) and HPB (Health Protection Branch Canada) regulations.

Advice: Handling conditions vary a lot from customer to customer, tests are recommended throughout the process of denesting, filling, conveying, palletization, warehousing, transportation and utilization by end users, etc. Specifications can be modified without notice. Please contact your IPL representative to confirm these data.

Quality Assurance:.. IPL is ISO 9001 certified and quality procedures are documented in our quality system.
